Job Title: Build Engineer

Department: Engineering (Build Team)

Location: Princeton, NJ

☒ Full-time ☐ Part-time ☐ Temp/Contractor

NIKSUN is the recognized worldwide leader in making the Unknown Known, by using next generation technology that revolutionizes the way networks and services are secured, protected and managed. The company develops and deploys a complete range of award-winning network forensics, security surveillance and performance management solutions for commercial and federal markets.

As build engineer you have ultimate responsibility in putting it all together!

Key Responsibilities:

- Maintenance and enhancement of overall software build infrastructure for entire product line
- Find and build open source components for FreeBSD and Linux OS
- Understand and improve existing product build and integration system
- Setup, maintenance, care and feeding of nightly builds for multiple projects

Required Qualifications:

- Experience with FreeBSD operating systems (Linux a plus)
- Experience with source code control and software build process and tools (CVS, SVN, git, make, tar, etc...)
- Shell scripting experience (bash, Perl, etc.)
- Analytical mind

Desired Qualifications:

- Experience working in large scale, complex build and integration environments.
- Ability to turn around build and integration requests quickly and find solutions to problems encountered
- Experience with at least one high level programming language (C++, Java, C, etc...)
- Experience building and maintaining FreeBSD ports

Educational Requirements:

BS degree or higher in Computer Science or related field

Travel Requirements: None

Telecommute: No

Relocation: No
